

APPLICATION & CLOUD WORKLOAD PROTECTION

Improve your application risk posture, protection & compliance with TRUEFORT FORTRESS

YOUR APPS ARE YOUR BUSINESS & THEY ARE AT RISK

Applications are the lifeblood of business - regardless of how or where they're delivered and accessed. Yet, while enterprises spend \$millions on new solutions, breaches and exfiltration continue to raise in frequency, profile, and impact.

WHY MOST SECURITY SOLUTIONS FAIL TO SECURE THE APPLICATION ENVIRONMENT

- **They are InfraSec and AppSec, protecting the code and host - not applications.** Securing individual servers, workloads, connections, and lines of code doesn't fully secure a live, multi-tier enterprise app.
- **They use static data and configurations to build policy and monitor posture and activity.** But this approach offers an incomplete view, missing attacks that emulate trust and legitimate operational changes - leading to risk, compromise, and false-positives.
- **They add operational burden and offer a long-time-to-value.** They require adding more agents on critical workloads, consume staff time, and bring hard configuration and learning curves - while still failing to close security gaps.

SEE YOUR APPS & WORKLOADS WITH THE RIGHT LENS

Created by former Wall Street IT executives, Fortress supports businesses sensitive to security, compliance and transformation - and that need comprehensive, effective security for their applications and the legacy servers and cloud workloads that host them.

Fortress is APP-FIRST - it reverses the model by starting from the app perspective. It's 360-degree approach continually consumes and analyzes the real-time telemetry you already own with our patented behavioral analytics engine that is optimized for performance and tuned to how apps operate.

With continuous behavioral monitoring you can bridge policy intent to app reality, and have the means to target vulnerabilities, detect anomalies, adapt policy to dynamic operational changes, and respond on-demand.

HIGHLIGHTS

KNOW YOUR APPS & AUTO-GEN DYNAMIC POLICY

Use behavioral analytics to visualize apps, relationships, and flows, whitelist policy, micro-segment, and update CMDBs.

HARDEN, DETECT AND BLOCK ZERO-DAYS & APT'S

Monitor, enforce and prevent breaches due to vulnerabilities like rogue service accounts, or lateral movement anomalies.

ACCELERATE INVESTIGATION & REMEDIATION

Reduce false positives and TTR with comprehensive, 7-tuple telemetry and unlimited, DVR-style historical playback.

USE OUR AGENT OR BRING-YOUR-OWN

Gain the fastest time-to-value with frictionless insight by leveraging the investments you've already made.

CROWDSTRIKE

TrueFort is a CrowdStrike® Store and Elevate Partner.

TrueFort is changing the way business protects applications to reduce risk, maintain compliance and combat cyber-attacks in the data center and across the Cloud.

COMPATIBILITY

APPLIANCE

RedHat® RHEL 7.2 +
CentOS 7.2 +

PROTECT AGENT

HOW IT WORKS

The Fortress platform uses the standard appliance-sensor architecture and deploys as a virtual machine on-premises or in public/hybrid/multi-cloud environments.

Built for scale, high performance, and as an extensible, open platform for integration across security and infrastructure management solutions, it is easily customized by your providers or your team.

- Load-balancing, n+1 appliance clustering
- Multi-tenant platform with role-based management
- REST API-driven and export-ready to SIEM, SOAR, SAP

The optional TrueFort Agent offers a light footprint to deliver full-stack, application and cloud workload protection. It actively monitors and enforces on over 115 parameters, streams and pushes differential data updates on configurable schedules, and alerts in real-time.

Or go agentless. Fortress can alternatively use live telemetry from your agent deployments of well-known EPP/EDR platforms like CrowdStrike Falcon®. Get the benefits of improved risk posture, protection and compliance within hours or days without the duplicate costs and deployment pain of typical 'app-centric' solutions.

Visualize and secure applications, their components, dependencies and relationships in real-time at 7-tuple depth.

GET FORTIFIED

Contact TrueFort today to get a briefing and demo of the industry's first and only application detection and response platform that secures what matters most in less time with better results.
